Who invented atomic theory?
John Dalton, right? In 1808.
But 2,000 years before him, an Indian philosopher Kanada wrote about something called Anu —
The smallest particle that can't be divided any further.
Dalton said atoms are indivisible, combine in fixed ratios, and move in space.
But Kanada said all of this — centuries ago.
And guess what?
He even said the shape of the atom is spherical — 2,600 years ago!
Just Imagine, There was no microscope or telescope.
Then how did someone describe the shape of something they couldn't even see?
And it's not just Kanada.
Vayu Purana, Srimad Bhagavatam mentions the same and even Tamil poet Avvaiyar said
"அணுவைத் துளைத்தேழ் கடலைப் புகட்டிக் குறுகத் தறித்த குறள்"
Which means Thirukkural pierced the atom and packed all seven seas into it.
Now, I am not saying all these people knew atomic theory by formula. What I am saying is, the concept of atom existed in India long before any Dalton.
Even Karl Marx believed that even Democritus, the Greek philosopher credited with early atomic ideas, may have gotten it from India.
The world is ready to accept it. The question is are we ready?

India had vaccines 500 years before the British even knew what germs were.

No, not in labs — These vaccines were made by village barbers and cowherds.

As early as the 16th century, Indians were already fighting smallpox using something called Tika.

They'd scratch your skin and apply a bit of dried smallpox from someone who had a mild case and your body would learn to fight it.
That's the same logic we use in vaccines today.

From Bengal to Gujarat, it happened across many places. In some places, like Dinajpur, they even had books on how to do it.

In 1767, a British doctor named John Zephaniah Holwell wrote about this. He said tikadars would treat 8 or 10 people in one house, and sometimes whole villages.

Then in 1802, The British brought their cowpox vaccine — called our tika method "a murderous trade" and banned it.

The British could have studied the method and improvised it. But No. They banned it altogether. Because they wanted to monopolise everything. They wanted to be the only authorities to sell anything in India. Remember how they even monopolised salt?

So the next time someone says the British brought us Vaccines, remember they just monopolised it.

There's a lot of noise about how bad India is.
But here's a truth they don't talk about:
Today, 1 in every 5 generic medicines used around the world comes from India.
We supply to over 200 countries, including the US and Europe.
But this didn't happen overnight.
In 1970, India changed its patent laws.
We stopped recognizing product patents for medicines —
which meant Indian companies could legally reverse-engineer costly foreign drugs,
and sell them at much cheaper prices.
We made life-saving drugs affordable — not just for India,
but for entire developing nations.
In the early 2000s,
when HIV drugs were selling for $10,000 in the West…
India offered them at $300. That one move saved millions of lives in Africa and Asia.
During COVID, India didn't just vaccinate 1.4 billion Indian people…
We exported vaccines to over 100 countries.
That's why the world calls us:
"The Pharmacy of the Global South."
And the real reason behind it is
Affordable science. Scalable manufacturing. And the willing to serve.
Because India has always been a giver — since time unknown…
and even today, we continue to give…
even during our toughest times.

One man named pulled off one of the biggest scams in India worth over 30,000 crore rupees in the late 90s.
Abdul Karim Telgi, printed fake stamp papers —
not currency, but legal stamp papers used for agreements, property deals, loans, everything.
And these weren't normal fakes.
He got into the actual government press,
used the real paper, real seals…
and created perfect fakes.
Banks, courts, even government offices used them — without knowing.
How did he pull it off?
Bribes.
Police, politicians, officials — he paid everyone.
For nearly 10 years, no one said a word.
By the time it exploded in 2001 —
Telgi had printed over 30,000 crores worth of fake stamp papers.

He was arrested and sentenced to 30 years in prison,
but died in 2017 after spending 16 Years in Jail, But imagine, a single man fooled the entire country for a decade.
The system knew.
And stayed quiet.

If you own a gun without a license in India, you will go to jail. But in this one small town in Coorg… almost every house has a gun. And it's totally legal. I was talking to my friend Varsha who's from the Kodava community. And she mentioned they have guns at home and they don't need a license. I thought she was bluffing and ignored it. But it turns out… she wasn't bluffing at all.
The Kodavas—this warrior clan are actually one of the only communities in India allowed by law to own guns without a license. Legally. Even today.
After the 1857 revolt, the British were scared and passed the Disarming Act— banning weapons for civilians. But they made a special exception for the Kodavas.
Because they were fierce warriors. had a long history of fighting invaders like Hyder Ali and Tipu Sultan—and they stayed loyal to the British.

And even after Independence, this special right continued and Kodavas got to keep the weapons.
And it's not just about keeping guns.
They worship them. During a festival called Kail Podh, they clean their weapons, teach kids how to use them, and offer prayers to their ancestors.
These weapons are not about showing off.
They're a part of their identity.
So the next time you're in Coorg…
don't mess with the Kodavas.

I joined a job… and quit it the same day."
When I was trying to grow on YouTube, I was also doing all kinds of odd jobs on the side — data entry, translation, freelancing, garments… whatever I could find.
One day, a school saw my videos…
and they offered me a history teacher job — with a 22,000 rupees salary.
Now for someone from my hometown…
That's a big amount.
Nobody's gonna offer me that kind of salary again. So I took it.
I went to school, spent half a day…
and then they handed me a contract:
For 2 years.
Which I was not expecting.

Because I was already spending 14 to 16 hours a day writing, researching, editing for YouTube.
I thought maybe I can balance both —
teach history and make videos on history.
But it was not that simple.
It was a full-time job.
Leave home by 8 in the morning… come back by 6 in the evening.
I was confused. I was scared.
I had zero backup plan. And I had to sign the contract right away.
And then called the one person who's seen me at my worst — my mother.
You know what she said? "Do YouTube." I was not convinced. I said "Maa I can never get a job for 22 thousand here. It's a good deal"
She said,
"Your videos are good. You'll be happy doing it.
But You won't be happy waking up every day to go to that school." And that was it. I quit the job the same day.
Didn't sign the contract. Walked away.
And just a few months later…
My videos picked up.
I went from 12,000 subscribers to 4 lakh in just 2 days. And now I have almost 4 million followers.
Everything changed.
I'm not telling this story to say I'm brave.
I was definitely scared.
I'm telling this because sometimes,
we already know what we're meant to do —
we're just too scared to choose it.
If you've got that gut feeling…
even if the whole world doesn't believe in it —
but you do… and you're ready to put in the work…
Then there's nothing that can stop you.
Remember, Results are just the consequences of your actions.

Every year, over 1 lakh men die by suicide in India.
That's 2.5 times more than women.
Almost 70% of all suicides are men.
Yeh toh patriarchal society hai.
Men have all the perks in this society.
Why are they still killing themselves?

Because from childhood, boys are told one harmful thing —
"Ladke nahi rote."
Boys don't cry.

His tears are quickly wiped away, not with comfort, but with shame. So they grow up thinking emotions make them weak.

Whereas women could cry it out. Talk to people. See how we can talk to our mother about anything. But men can't even sit with their father for two minutes?

And Cinema makes it worse. Every hero is stone-faced, never breaks down, handles everything alone.
So men bottle up everything — stress, pain, depression. Everything.

Once, my dad consoled me while I was crying.
And he said something I'll never forget.—
that he once tried to kill himself.
What shook me most was… none of us in the family had any idea.
In fact, we had started keeping our distance.
Because all we saw was an angry, irritated man.
But behind that anger… was pain.
And we missed it.
Even I used to hold back tears to prove I was strong like a man.
But honestly? Living like a man sucks.
There's no beauty in there. No space to be soft. No space to feel anything.
You just survive. You never really live the life.
And after a point, I guess… even survival becomes exhausting.

So next time a boy cries — let him cry.
Men deserve to feel more than just anger
